

PC Spec Checker v3.0

PC Spec Checker v3.0

One double-click to see everything about your PC.

No installation · No coding · No technical knowledge needed. Just download one file, double-click it, and instantly see your full PC specs.

 [Korean version \(한국어 버전\)](#)  **New here? → Read the [Complete Beginner's Guide \(GUIDE.md\)](#)** (PDF: [GUIDE.pdf](#))

What is this?

PC Spec Checker is a single `.bat` file that scans your Windows PC and shows you:

- What CPU, RAM, GPU, and storage you have
- How healthy your disk drives are
- What software and developer tools are installed (auto-checks **up to 193 tools**)
- A **score out of 100** rating your PC's development readiness

Think of it as a **free, instant health checkup for your computer.**

 **It's safe.** The tool does not install, change, or transmit anything — it only **reads** your PC info. The full source code is inside the `.bat` file; open it with Notepad to verify.

Quick start (3 steps)

1. **Download** — On GitHub click the green `Code` button → `Download ZIP` → extract it. (Or just grab the single `PC-Spec_Checker.bat` file.)
2. **Run** — Double-click `PC-Spec_Checker.bat`. If a security warning appears, click `More info` → `Run anyway`.
3. **Choose** — Type `1` in the menu and press Enter → all specs appear at once.

No installation, no account, no internet required.

What can it check? (15 menu items)

#	Menu	What you'll see
1	Show ALL ★	A full scan of everything below
2	Basic Info	PC name, Windows version, motherboard, BIOS
3	CPU	Name, cores, speed, temperature
4	RAM	Total + each stick (size/type/speed)
5	Disk	SSD/HDD type, health status, free space
6	GPU	Graphics card, VRAM, driver
7	Network + Display	IP address, internet response time, monitors
8	Battery	Charge level, battery health (laptops)
9	Security	Antivirus, firewall, UAC, BitLocker
10	Startup Programs	Apps that run at boot
11	Audio / USB / Bluetooth	Connected devices
12	Installed Apps	Browsers, office, media, etc. (8 categories)
13	Dev Tools	Deep scan of 193 tools (17 categories)
14	WSL	Windows Subsystem for Linux status
15	Score	Rating out of 100 + recommendations
0	Exit	Close the tool

See the [Complete Beginner's Guide](#) for a detailed explanation of each item.

The score system

Your PC is rated out of **100 points across 5 categories**.

Category	Max	What's measured
CPU	20	Core count (8+ = full marks)
RAM	20	Total memory (32GB+ = full marks)
Storage	15	SSD/NVMe type + free space
GPU	10	Dedicated GPU + VRAM size
Dev Tools	35	Essential tools installed

Grades: S(85–100) · A(70–84) · B(55–69) · C(40–54) · D(0–39) Specific weaknesses and recommendations are shown below the score.

Prerequisites

Item	Required?
Windows 10 / 11	✔ Required (no Mac/Linux)
PowerShell	✔ Required but built into Windows
Internet	● Optional (works without it)
Administrator rights	● Optional (a few temps show N/A without)
Extra installs	✗ Not needed

FAQ

- **Is it safe?** → Yes. It only reads info — no install, change, or transmission.
- **Need admin rights?** → No. Only a few temperatures show **N/A**.
- **Works on Windows 10?** → Yes, both 10 and 11.
- **Works on Mac/Linux?** → No, Windows only.
- **It's slow** → A full scan can take 30–60 seconds.

More questions and fixes are in the [guide's troubleshooting section](#).

Example output

```
=====
PC Spec Checker v3.0
Deep Hardware + Dev Tool Scanner
=====

[ AI Coding Tools ]
[0] Claude Code      : 2.1.80 (Claude Code)
[0] Gemini CLI        : 0.33.0
[0] OpenAI CLI       : openai 2.15.0
[0] Codex CLI        : codex-cli 0.114.0
[X] Aider            : not installed

=====
TOTAL : 93 / 100 (Grade: S)
=====
>> Excellent dev machine!
```
